• • •

The pages listed here correspond roughly to those of the book. However, since the chapter pagination of this edition corresponds to that of the book, the agreement, while not perfect is likely to be within a page or two.

- A to F stars, opacity of, 299
- Abbot, D. C., 474
- Absorption, 237
  - the classical view, 81
  - by an electric dipole, 352
  - the quantum view, 81
  - See also* Opacity
- Absorption coefficient, 119
  - atomic, 80, 297
  - atomic line, 349, 361, 373, 381, 383
  - determination from limb-darkening, 262
- Abundance, determination of, 385, 390
  - See also* Mean molecular weight
- Adiabatic
  - change, 45
  - collisions, 377
  - exponents, 209
  - gradient, 91, 94, 122, 170, 191
  - pulsation, 204, 215
- Albedo, scattering, 274
- Aller, L. H., 135
- Anderson, L., 439
- Angle-averaged redistribution functions, 421
- Angular momentum
  - and rotational distortion, 180
  - and star formation, 116
- Appenzeller, I., 171
- Approximate formulas for polarization, 456
- Arfken, G., 181
- Asymptotic behavior of  $T^{(0)}$ , with scattering, 326
- ATLAS atmosphere program, 276, 318, 436
- Atomic absorption coefficient, 80
- Atomic abundance
  - from curve of growth, 390
  - determination of, 385
- Atomic line absorption, 80
  - from impact phase-shift theory, 371
  - from static theory, 381
